**DETAILED ACTION**

***Claim Objections***

1. Claim 9 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

The sole limitation recited by claim 9 (that the second image data is bitmap data) is recited in parent claim 8.

***Claim Rejections - 35 USC § 102***

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 8-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Onodera.

Re claims 8-13, Onodera discloses (Figure 3; column 5, line 10 - column 7, line 2; particularly column 6, lines 17-54), an arrangement for receiving page description language image data (compressed raster -- i.e. bitmap -- data) and converting (expanding) this input data to image raster (bitmap) data. The time required for this conversion is compared with the time required for transferring raster data (step S307; column 6, lines 44-46). If the former is shorter then a new compression means is selected for the page description language data (step

307), which inherently requires the retention and storage of this data until this selection is completed. The raster data is then used to produce a printout.

***Allowable Subject Matter***

4. Claims 1-7 & 14-16 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter:

Re claims 1, 3, & 14 (and dependent claims 2 & 4-7), the art of record does not teach or suggest the recited comparison of the volumes of first image data and third image data, where the first image data is the originally received data and the third image data is the result of compressing second image data produced by developing the first image data, and then conditionally storing image data based on the comparison result.

Re claims 15-16, the art of record does not teach or suggest the recited conditional (based on whether image data of two previous pages are stored as second rather than first image data) comparison of first image data developing time and a second time required for printing a recording medium

***Response to Arguments***

6. Applicant's arguments, see Response filed 5/13/05, with respect to claims 8, 10, & 13 (and dependent claims 9 & 11-12) have been fully considered but they are not persuasive.

Art Unit: 2624

Re claim 8, Applicant argues (5/13/05 Response: page 7, line 5 - page 8, line 9) that the development of the "page description language" of Onodera corresponds to steps S301-S305 of Onodera, and that this development timing is inconsistent with that recited in the claim language.

Upon further consideration, Examiner has made a new rejection, reading the claimed "page description language" upon the compressed raster data of Onodera, which is "developed" into a raster bitmap in the decompression process (the timing of which is determined and compared in step S307 of Onodera).

Re claim 8, Applicant further argues (5/13/05 Response: page 8, line 10 - page 9, line 10) that Onodera discloses the storage of compressed raster data in accordance with the result of the Onodera time comparison.

As noted above, upon further consideration, Examiner has read the claimed "page description language" upon this compressed raster data of Onodera.

Re claims 10 & 13 (and dependent claims 9 & 11-12), Applicant argues (5/13/05 Response: page 9, lines 11-13) that these claims are allowable for the same reasons as claim 8.

Applicant's arguments re claim 8 are addressed above.
